

Energy Enhancer Patches

- Clinically proven to increase energy and endurance
- Supports a physical fitness routine
- Convenient and easy to use
- Fast results
- Patented, proprietary form of phototherapy
- No drugs, chemicals or stimulants

Sustained Energy with No Caffeine, Drugs or Stimulants

Before starting LifeWave in 2004, our Founder and CEO (David Schmidt) was already compelled to answer one persisting question: how can people sustain energy without using drugs, stimulants, or caffeine? The answer led to the development of Energy Enhancer, the first patch we ever developed and the foundation of our patented phototherapy technology.

Energy Enhancer Release Makes National News

Shortly after Energy Enhancer was released, David was introduced to renowned women's swimming coach, Richard Quick, of Stanford University. Just three weeks after providing the patches to his team, six of its eight members broke their personal lifetime records. Stanford Team members were then spotted wearing the patches during the Olympic Swimming trials, propelling LifeWave into the national media spotlight. As a result, over 1000 people came forward to become LifeWave Distributors.

Since that time, Energy Enhancer has helped people around the globe go further, run faster, climb higher and embrace each day with renewed stamina and vigor. A safe more effective alternative to other energy products, Energy Enhancer will make you forget you ever hit that late-afternoon wall again.

What Is Phototherapy?

The science of phototherapy, which has been around for about 100 years, uses light to improve the health of the body. And modern forms of phototherapy such as Low Level Laser Therapy, which helps reduce wrinkles in the skin, are very well understood scientifically.

But this idea is nothing new. As far back as two thousand years ago, the ancient Greeks had a center for studying the effects of different colored lights on the body. Even the ancient Egyptians, who promoted health by focusing sunlight through colored glass on certain areas of the body, understood this concept.

How Our Phototherapy Patches Work

Your body emits heat in the form of infrared light. Our patches are designed to trap this infrared light when placed on the body, which causes them to reflect particular wavelengths of light. (see Usage Tab for placement instructions). This process stimulates specific points on the skin that signal the body to produce health benefits unique to each LifeWave patch.

How Does This Relate to Increasing Energy?

Energy Enhancer patches reflect particular wavelengths of light, which stimulate specific points on the skin that increase energy production in the cells (beta-oxidation). Because beta-oxidation produces more than twice the energy of carbohydrate burning, this is the most effective and natural way to increase overall energy.
